

# IDEAS

easy  
medium  
hard/impossible?

visualize...

## Repositories

1 - most popular, sorted by stars/forks  
+ make horizontal  
+ maybe timeline for specific repos  
+ other visualizations?

2 - histograms of fork/star distribution  
+ to show likelihood of big, popular repos

3 - historical timeline of amount of repos/users  
+ shows growth of GitHub

4 - gross growth of GitHub

5 - maybe quarters instead of months?

6 - as bar chart / pie chart / scatterplot  
+ histogram also a good idea to show distribution

7 - graph of author interaction via working...  
... in same repository

8 - hard because getting data might not be easy, preprocessing?

## User/org - accounts

1 - most popular, via stars/forks or via most followed  
+ stars/forks accumulated for orgs  
+ most followed for users  
+ visualization is similar to repo-most-popular

2 - users with most forks/stars/repos  
+ just to show how active users are

3 - timeline of follower acquisition  
+ as bar chart / pie chart / scatterplot  
+ histogram also a good idea to show distribution

4 - users with most used languages  
+ as bar chart / pie chart / scatterplot  
+ histogram also a good idea to show distribution

5 - graph of author interaction via working...  
... in same repository

6 - hard because getting data might not be easy, preprocessing?

7 - already grouped by repo, user, event  
+ some ideas are similar or could be used together  
\* us 9 could also be used for a user instead of all of GitHub

8 - us 1k 2 should be shown on same page  
\* us 3 rather goes into a "meta page"  
L7 could also show users growth on GH.  
\* us 7 introduces languages, maybe use a new category for that and put more visualizations in there  
L7 most used language  
L7 most stars/forks per language  
L7 top polyglot language combination  
\* meta category could also show a world map showing users location?  
\* us 8 could also be used to show organizations

9 - commits per weekday & week  
+ could also work for different event types (issues, pull requests, repo creation)  
- event type per day/week/month/... to another timeline visualization.  
- mean of frequencies of event types per week/day

10 - Bar chart  
- Histogram  
- Timeline / Line chart  
- Graph / Network  
- Scatterplot  
- Radar chart

11 - Data source:  
- github.org < choose Mo, no streaming / GitHub API  
- Chart types that are possible:  
- Bar chart  
- Histogram  
- Timeline / Line chart  
- Graph / Network  
- Scatterplot  
- Radar chart

12 - users

## FILTER

- choose data set 1, easier to work with...

+ No REST API  
+ archived & preprocessed  
+ BigQuery available  
- Live data not possible

## Visualizations:

+ like the different amount of possible visualizations

L7 diverse

\* - graph might be hard to realize

L7 maybe pre-process for specific user

L7 limit graph depth?

\* drop users with most forks/stars/repos?

L7 seems rather similar to the rest

L7 maybe change into "... most contributions"

\* graphs would be nice for different layouts?

Layouts?

## CATEGORIZE

- already grouped by repo, user, event

- some ideas are similar or could be used together

\* us 9 could also be used for a user instead of all of GitHub

\* us 1k 2 should be shown on same page

\* us 3 rather goes into a "meta page"

L7 could also show users growth on GH.

\* us 7 introduces languages, maybe use a new category for that and put more visualizations in there

L7 most used language

L7 most stars/forks per language

L7 top polyglot language combination

\* meta category could also show a world map showing users location?

\* us 8 could also be used to show organizations

\* us 1k 2 should be shown on same page

\* us 3 rather goes into a "meta page"

L7 could also show users growth on GH.

\* us 7 introduces languages, maybe use a new category for that and put more visualizations in there

L7 most used language

L7 most stars/forks per language

L7 top polyglot language combination

\* meta category could also show a world map showing users location?

\* us 8 could also be used to show organizations

\* us 1k 2 should be shown on same page

\* us 3 rather goes into a "meta page"

L7 could also show users growth on GH.
